

Agents that operate your systems, **not just talk about them**

We design and build custom AI agents that log in, navigate, extract, reconcile and act inside the software you already run — including the systems that expose no API at all. Delivered worldwide, on your hardware, in your cloud, or fully air-gapped.

THE PROBLEM WE SOLVE

- **No API, no problem.** Payer portals, carrier websites, mainframe screens, government filing systems — if a human can do it in a browser or a terminal, an agent can do it.
- **Not RPA.** Scripts replay fixed coordinates and break on a layout change, silently. Agents interpret the interface, adapt, and alert when something shifts.
- **Not a chatbot.** These agents perform work and leave an audit trail, rather than answering questions about it.

HOW WE DELIVER

- **Your environment.** On your hardware, inside your cloud tenant in the region your regulator requires, or entirely air-gapped with no route out.
- **Auditable by design.** Every run logged, replayable and reversible. Dry-run mode performs no writes.
- **You own it.** Full source handover on delivery. No per-seat licences, no lock-in. Escrow available.
- **Frameworks.** Designed towards GDPR, DPDP, HIPAA technical safeguards, SOC 2 alignment, PDPL, POPIA and LGPD.

ENGAGEMENT TIERS

TIER	CORE BUILD	TIMELINE	INDICATIVE
Local/ Edge	One agent, 2–3 tools, retrieval over your documents. Local weights, no outbound calls.	2–4 wks	₹2–6L \$3–8k
Cloud native	Multi-agent orchestration. REST/GraphQL, webhooks, message queues.	4–8 wks	₹8–25L \$10–30k
Enterprise	Agent estate with SSO, audit, monitoring and a 12-month SLA.	8–16 wks	₹30L–1.5Cr \$40–180k
Government/ Defence	Air-gapped deployment, clearance requirements, source escrow.	12–24 wks	₹1Cr+ \$120k+

HOW AN ENGAGEMENT RUNS

01 Discovery

Systems, data and failure modes mapped. You receive an architecture document, a feasibility report and a fixed-price build quote.

02 Build

Short increments against your real systems in a sandbox — not a mock. Weekly demo, source access from day one.

03 Validate

Benchmarking against a labelled evaluation set, adversarial testing, and a dry-run period with every write suppressed.

04 Deploy & hand over

Deployment into your environment, monitoring wired to your on-call, full source and runbooks.

Start with a fixed-price discovery — ₹60,000 / \$750, credited in full against the build. Five working days. You receive an architecture document, an integration feasibility report and a fixed-price build quote. If the honest answer is that you do not need an agent, we say so — and you keep every document either way.
